

SHIBINA S — PORTFOLIO USER GUIDE

Comprehensive Manual for Running, Managing & Customizing Your Web Portfolio

1. Executive Summary & Overview

Welcome to your personal web portfolio! This document provides a clear, step-by-step guide explaining how your portfolio is structured, how to download and run it locally on your computer, and how you can easily edit text, projects, skills, certificates, and media without complex programming knowledge.

Client Name:	Shibina S
Professional Role:	Web Developer & Software Engineer
Location:	Deira, Dubai, UAE
GitHub Repository:	https://github.com/mdyusuf0/shibina-portfolio

2. Technology Stack Breakdown

Your portfolio is built using modern, industry-standard web technologies designed for ultra-fast page speed, modern glassmorphic aesthetics, and full mobile responsiveness:

Component	Technology	Purpose
Frontend Framework	React 19	Powers interactive UI components & state
Build System	Vite 8	Ultra-fast local development & production bundler
Styling Engine	Tailwind CSS v4	Modern utility-first responsive styling
Design System	Glassmorphism 2029	Glass cards & sleek black edge glows
Animations	AOS & Canvas Particles	Smooth scroll reveals & cursor particle effects

3. How to Download & Run Locally (Step-by-Step)

Follow these simple steps to download and run your website on your computer:

Step 1: Install Node.js

Go to <https://nodejs.org/> and download the **LTS (Recommended)** version. Install it using standard installer prompts.

Step 2: Download Code from GitHub

- Visit <https://github.com/mdyusuf0/shibina-portfolio>
- Click the green **Code** button and select **Download ZIP**.
- Extract the ZIP folder to your Desktop or preferred folder.

Step 3: Open Terminal in Project Directory

Open Command Prompt (Windows) or Terminal (Mac) and navigate to your project folder:

```
cd Desktop/shibina-portfolio
```

Step 4: Install Dependencies

Run the following command to install required libraries:

```
npm install
```

Step 5: Start Local Development Server

Run this command to start your live local preview:

```
npm run dev
```

Open **http://localhost:5173** in Google Chrome or any browser.

Step 6: Build for Production Hosting

When ready to upload to web hosting (Vercel, Netlify, Hostinger, cPanel), run:

```
npm run build
```

4. How to Edit & Customize Website Content

All website text and content is centralized inside one easy-to-edit file: **src/data/portfolioData.js**.

a) Editing Personal Details & Contact Info

Open **src/data/portfolioData.js**. Update **personalInfo**:

```
export const personalInfo = { name: "Shibina S", title: "Web Developer & Software Engineer", location: "Deira, Dubai, UAE", phone: "+971 523346885", emails: { primary: "Shibinaibi@gmail.com" } };
```

b) Editing Live UAE Projects & Web Links

In **portfolioData.js**, update **projects** array to modify live URLs (mizco.ae, mizhome.ae, mizperfectsupplies.com), titles, and descriptions.

c) Editing Technical Skills

In **portfolioData.js**, update **technicalSkills**. Official SVG brand logos render automatically for all skills.

d) Editing Work Experience & Education

In **portfolioData.js**, update **experienceData** and **educationData** to add new employment roles or degrees.

5. Managing Media Assets & Resume

All media files, downloadable resume, and certificate images are stored in the **public/** folder:

Asset Type	File Path	How to Replace
Resume PDF	public/shibina-resume.pdf	Replace with your new PDF using exact same filename
Hero Video	public/hero-video.mp4	Replace with new MP4 video file
Hero Poster	public/hero-poster.png	Replace with new PNG image
Certificates	public/certificates/	Add new certificate PNG images to this folder

6. Publishing Changes to GitHub

After saving edits locally, run these terminal commands to push updates to GitHub:

```
git add . git commit -m "Update portfolio content" git push origin main
```

Thank you, Shibina! Your portfolio is ready to showcase your engineering excellence.
